New Research in Neurology and Developmental Disabilities

By Meghna Patwari

May or to have left behind and into the local hypertensive doctors who would prescribe sugar content tablets for their or their grandparents who would make a triple division of benzamidinazol tablets that would definitely not be used ever. But now, in the USA, the Homeopathic or Ayurvedic field is not considered or recommended credibly even though Homeopathic remedies have been recognized in a similar study by the US FDA. Therefore, it was a pleasant surprise to read about a Dr. Gurmukh Oswal who has founded an integrative medicine treatment called G-Therapy that helps with various chronic physical disorders from autism to Multiple Sclerosis and Neurodegenerative. Dr. Oswal has been an award-winning Center for Life Sciences, Health and Medicine in Pune whom he has treated more than 10,000 cases of neurological and developmental disabilities from 40 countries with an average percentage success rate.

Dr. Oswal’s medicines in simple terms is like eating Homeopathic remedies in sugar coated tablets. He uses pharmaceuticals with homeopathic herbal tissue salts and homoeopathic remedies. The tissue salts bring about changes in neurotransmission while the homoeopathic remedies act as a catalyst. Interestingly most patients have seen most improvement in G-Therapy as compared to conventional therapies.

There are several things that are unique about Dr. Oswal’s Center (www.mycys.org). For one, the center offers treatments for a wide range of disorders which include autism, ataxia, dementia, tremor, and seizures. Second, many experts believe that medical marijuana has helped his group, and Central Pain is one example of how Dr. Oswal offers a new ray of hope for these patients. A doctor in Salford and Ayurvedic, by name in recovery, and his findings show he is starting to improve the quality of life for the average 150 million patients worldwide who suffer from such neurological conditions and learning disabilities. In a fever where most other medical centers have given up, G-Therapy combines Homoeopathy, Ayurveda, and Neurophysiology, which help improve cognitive and motor functions, speech and behavior in patients. Dr. Oswal is in the process of starting a clinical trial in South Korea. It is also aiming to work in the universities with which Dr. Oswal conducts his practice. He tours around the world from Germany to South Korea, but he remains rooted in his personal and family. His center does not accept anyone in India who cannot afford any of his treatments. It is sure to see such generosity in our world where money is the only thing up for grabs.

Dr. Oswal’s medicine is not yet available in the UK because the US Doctors do not allow medicines such as this to be legally and safely used. Yet, it has been more than a decade since he started. Therefore, all patients have to come or send their representatives to his center in Pune. Dr. Oswal is hoping that this change and is impressed by getting partners by using pharmaceutical companies, international universities, and medical centers for distribution and research, so his treatment can reach millions of affected patients.

Considering that G-Therapy has been given huge attention of patients, many MRI, especially those affected by physical or mental disorders, start to believe that this treatment is not accessible in the UK as well. It’s important to know that there is a revolution happening place in neurological disabilities and that this treatment is being seen in a revolutionary way by an Indian.

Pune: A ‘dormant supreme control of the brain’ hypothesis made by Pune based Dr Gunwant Oswal got a boost by the recent discovery of ‘Master Regulator Gene of brain’ in Canada. Both theories mention the existence of a dormant gene in the brain which can initiate recovery in irreversible brain disorders.

Treatment of ten thousand patients from over 60 countries started on Saturday in the ‘center of life sciences’ with the gene therapy (g therapy) developed from the dormant brain research. Claiming that G therapy is the future revolution of neurological disorders and brain treatment, the Oswal duo will expand their research on patients suffering from dementia and autism.
Mind and Matter

PUNE-based medical practitioner Dr Gunvant Oswal and his daughter, Dr Pooja Upasani, are pioneers in evidence-based research and treatment of neurological disorders. Together, at the Center for Life Sciences, Health and Medicine in India, they have helped more than 10,000 patients of neurological disorders with different etiopathologies with their G Therapy (NeuroG) Medicine. This research has been peer-reviewed by various neurologists in India and abroad. In 1999, Oswal—after treating more than 2,000 patients with neurological disorders—had presented a hypothesis on the existence of a “dormant supreme control” of the brain, which when stimulated can initiate recovery in irreversible brain disorders. At a press conference held recently, he shared that a research by a group of scientists at Ottawa University in Canada, led by Dr David Picketts, announced the discovery of a Master Regulator Gene in the brain. Oswal’s original discovery and hypothesis of 1999 has received a boost by this finding of the Canadian scientists. At an early stage of his research in 1999, after studying improvements in some 2,000 patients with conditions such as cerebral palsy, autism, SSPE, and neurodegenerative disorders such as vanishing white matter disease, leukodystrophies, hereditary neuropathies, and Charcot Marie Tooth disease, Oswal had postulated a hypothesis that there is a possibility of a dormant supreme control in the brain, which when stimulated, can initiate recovery in different types of irreversible brain disorders. Elaborating on the therapy, Oswal said, “G Therapy (NeuroG) Medicine is based on the Integrative System of Medicine. It is a combination of pharmacopeia-approved homeopathic remedies, which draws insights from the principles of Ayurveda and neurophysiology.” Oswal has also been working in collaboration with Dr Christoph Garner since 2005. Garner, who was present at the conference, said, “We have been working to incorporate G Therapy into management of patients with neurological disorders. We have seen encouraging results in patients and incorporated the therapy in our clinic in Germany.” Oswal and Upasani believe that their G Therapy (NeuroG) Medicine has the potential to revolutionise the treatment of brain and neurological disorders.
Pune doctor claims to have observed ‘brains dormant supreme control’

Umash, TNJ, July 26, 2014, 15:32 PM IST

PUNE: For city-based medical practitioner Ganesh Oswal, the discovery of a ‘master regulator gene’ in the brain as made by a group of scientists at Ottawa University in Canada recently, has a familiar ring.

In 1999, Oswal after treating more than 2,000 patients with neurological disorders had presented a hypothesis on the existence of a ‘dormant supreme control’ of the brain, which when stimulated can initiate recovery in irreversible brain disorders.

Oswal’s original hypothesis made in 1999 has received a boost by this finding of the Canadian scientists. Together with his doctor daughter Poona Upasani at the Center for Life Sciences, Health and Medicine in India, Oswal has claimed to have helped more than 10,000 patients of neurological disorders with different etiopathologies with their G therapy (NeuroG). This research has been peer-reviewed by various neurologists in India and abroad.

“With a huge data of more than 2,000 cases of developmental disabilities of different etiopathologies and 70% of them responding to G Therapy, I imagine with my very little knowledge in neurology, if there is any dormant supreme control in the brain which when stimulated can initiate recovery because many cases of irreversible brain damage have shown perceptible improvements with G Therapy. These are my observations and not facts,” Oswal said.

Elaborating on the therapy, Oswal said, “G Therapy (NeuroG) is based on the Integrative System of Medicine. It is a combination of pharmacopoeia approved homoeopathic remedies which draws insights from the principles of ayurveda and neurophysiology.”

TREATMENT IN BRITISH TRIALS

Brain-damaged toddler Shireen Bantish is starting the road to recovery with a pioneering treatment that could put her on the road to recovery.

BY JAY BOWERS
عادة إلى الحياة من ثقب إبرة

في ألمانيا قال الأطباء إنها حالة ميسيوس منها، وفي إنجلترا أكدوا أنها ستموت بعد ثلاثة أشهر. وفي فرنسا اعتبروا أن مجرد تحسن حالاتها إعجاز طبي، ومع ذلك عادت إلى الحياة.

هي شرين نبيل، ولدت في نوفمبر 1988، بسبيبة عدوة فيلند البريطانية من أبو عربين وام بريطانية، وبعد مولدها بثلاثة أشهر بدأ تصاب بنوبات تشنج في شهرها الثالثة، دعت بها أخصائي أعضاء الدماغ شهير يدعى د. ويلسون. شخص حالها في البداية على أنها "سوراء" ثم بعد فترة من العلاج وشخص المرض يظهر شديد في الحم، وقال كلمته الفاصلة:

"لا يهم في شفاء ابنتك والأرجح أنها لن تعيش أكثر من ثلاثة أشهر."

ابتُكلت بترميم الأذن وقد كنت لها تلك الأذن مهينة. رحلت في النهاية إلى العالم.
لا تفقد ليشنا الأمل في شفاء
ابنتنا وعليها والطبية
إلى اللهم إنك الوصي
المختصين في علاج الأطفال فقلب
إلى الله إني.

لا يوجد نجاح يخفق القسط من وجهة
الлечية لكنها كانت
مهمة بالنسبة لي فرده الأمل في شفاء
ابنتي.

وهذا من أول أفكاري،
أ bè 활용ت الشارح مع د. ويسن بعد
العديد من رجاء، صغير لا يقول لأم
غيرها ماذالله لي فان ككالة القوة
والإيمان يذبرة الله على تحقيق
المعجرون، لكن غيري قد لا يلمكها.
لا معرفة أبدا بعناية العلاج
الطبيبي بقرب احتلا كاثان تلقى
دعا من العينية الشهيرة جوان
كولينز التي ودعت لنا ابنتنا مثل
ابتني.

- عشيت من أجل هذا اليوم المثالي في أعشابه، حية وذاتية، تفضلون لي، وتحسن علاجات حسابها، سأترك لكم كلمة، وليست باختصار لم تتعجب أطراف من لاحقة أشرفت على صورتها وتمكن الوقت على نموذج كلفت. من كل شيء."
Dr. Gunvant Oswal’s Research Has Benefited Thousands

Dr. Gunvant Oswal’s research has significantly benefited thousands of individuals suffering from various neurological and psychiatric conditions. His innovative approaches have revolutionized the treatment of diseases such as autism, multiple sclerosis, and Down’s syndrome. Oswal’s research has been extensively studied and praised for its potential to provide holistic and effective treatments.

In Pakistan, a medical center near Islamabad has adopted Oswal’s research techniques, leading to marked improvements in patients’ conditions. Oswal’s research not only offers hope to individuals and families but also opens new avenues for future medical advancements.

Springing Them Back To Life

Dr Gurvendrinder Oswal invented C-therapy, a therapy which he says defies conventional belief that brain damage cannot be reversed after the age of six. His formulation directly stimulates the brain centres which result in a change many times more effective than conventional methods.

Exalting the concept of nervous system director, Dr Oswal has invented a system which allows for the improvement in various parameters within fifteen to twenty weeks. It is always better to act early than late. As an example, patients who were diagnosed with cerebral palsy, a result of cerebral cortex damage, have started improving with the help of C-therapy. They showed reduction in spasticity, improvement in gait, and also possibility of a surgical operation being required. The therapy can also cure mental retardation and autism. A patient of 125 years has been treated successfully.

Dr Oswal has worked at the prescribing centre in New Delhi, also providing for research and the training of therapists. He has published several research papers and articles about the therapy and its successes.

New centre to offer ‘G-therapy’ for neurological disorders

By A Staff Reporter

PUNE: Prominent Ayurvedic medical practitioner from Pune and inventor of the G-therapy treatment for neurological disorders, Dr. Chauvait Oswal, has announced that an exclusive centre for neurological disorders and complementary medicine would be set up in the city by the end of this year.

The multi-disciplinary centre would offer different therapies from various branches of medicine keeping in mind the holistic healing of the patient.

Speaking to reporters here on Friday, Dr. Oswal claimed that modern medicine had little to offer by way of treatment for conditions like cerebral palsy, mental sub-normality and autism. “Patients have to rely on occupational therapy and physiotherapy. To the best of my knowledge, there is no medicine to improve the condition in the motor and higher cortical functions of the brain. The number of these patients is much higher and there is no hope for them. Therefore, we have planned an exclusive centre in the city which will offer them the G-therapy, which has shown remarkable results in these areas,” he said.

The G-therapy consists of administration of pills to patients. These pills are made from a combination of herbal extracts of which is known only to Dr. Oswal. They are potent and also contain biochemical salts.

“This medicine is not a cure in itself but just complementary to other treatments. But it has improved the condition in motor and higher cortical functions of over 5,000 patients worldwide. The results have also been scientifically documented,” Dr. Oswal said, adding that the G-therapy works on the principles of homoeopathy and ayurveda, the Indian system of medicine, and does not have any side-effects.

The centre’s new building will be designed by renowned architect Christophor Benninger and will be located at Clover Pinnacle Ridge, near NIBM at Kondhwa.
Miracle doctor’s wonder pill for major brain disorders

Sowmya Ajith

BANGALORE: It was a miracle of sorts. As local doctors watched agape when a four-year-old child, who had been nothing more than a vegetable barely an year earlier, came walking down the aisle and slowly spoke formed sentences, even as Guruvan D. Oswal, the doctor behind the miracle, impassively stood by.

This was nine years ago, in Pune. Since then, Oswal’s fame hasspread far and wide, and hundreds of anxious parents, who have a child born with or suffering from injuries to the brain, have turned to him as their last hope.

“About 70 per cent of the children who come to me do show signs of improvement. The others are probably too severe cases to be helped, but we keep trying anyway,” Oswal, who is on a visit to Bangalore, told The Times of India.

Oswal works with patients aged between 18 months and 52 years (which is presently the oldest), in India, United Kingdom and the United States. An organisation dealing with brain injuries in Egypt has also expressed interest, the doctor said.

“All my treatment involves is the standard sugar coated tablets used by homeopathic practitioners. I put in a liquid made from a herb mixture and body soups that I developed. The patients are required to take this once a day,” Oswal says.

This “herbal pill” as a British medical magazine called it, treats a whole range of brain disorders, from cerebral palsy to autism to mental retardation, for all of which there is no allopathic cure. Over 4,500 patients are already being treated at the Sanjeevani Clinic, Pune, with 5,000 on the waiting list.

“Irrespective of every 100 children born in India are sub-normal, that is they have below-normal IQ of 100. Of these, 20 per cent suffer from cerebral palsy, which is about one or two children in a thousand,” the doctor explains.

He did attempt to use governmental machinery to spread his treatment method, called the G-therapy. “It is very difficult to go via the government. It is heart-breaking. But if the government does come forward to use my treatment and help the public in a big way, and agree to protect my intellectual property rights, I am willing to do all that I can,” Oswal says.

The Rescue foundation for the Brain Injured Infant in Britain did a chemical analysis in 1998. The pills were also given to about 10 children initially in Britain. The result was no heartwarming, that parents of brain-injured children there have started a G-therapy support group which even publishes a quarterly newsletter updating the latest on the therapy, and the health of various patients. The support group also functions in the US.

The doctor is, for the first time, planning a branch in Bangalore also, with the help of Rafin Muneer Fazal, sister-in-law of Medical Education Minister Nafees Fazal. Muneer Fazal, whose grandson is under Oswal’s care, says: “None of the other doctors had given us any hope. But now with Dr Oswal, I am confident that my grandson will do all the things any other child will do.”

The Bangalore centre is being planned at the meeting place of all of Oswal’s clinics in the south. The doctor is also planning a major centre at Pune, to accommodate more patients, and additional research on sub-acute sclerosing pan-encephalitis (SSPE) which is a lethal disorder afflicting children.

(Oswal can be contacted at 020-65551; Fax: 020-642800; email: guruvan@pm2.vsnl.net.in; web http://www.g-therapy.org/)
Ray of hope for mentally retarded

THE unflinching devotion of Dr Gunwant Oswal, a general practitioner from the city in the study of medicinal properties of a variety of biochemics (tissue-salts), shrubs and herbs and their application in the treatment of ‘mentally retarded’ patients, some of whom were literally in the ‘vegetable form’ has produced startling results as regards their motor, mental and sensory functions.

These results have not only restored a great deal of solace to the parents of the children that he had successfully treated, but he also showed a ray of hope in the lives of several other parents of such children who have been battling travelling through a dark path torn with fear of_step_overs to receive or stimulate their only and sole companion, until now, was none other than agony and perhaps for a change, anguish.

Though hard to believe, it is a matter of fact that even in this era in which various sciences and technologies in various disciplines and branches have bloomed profusely and mind boggling discoveries have been made, unfortunately, unfortunately, medical science has not done its share which is owed to their parents of the mentally retarded ones so as to revive their hopes or offer them any relaxation.

The medical science, both medical as well as surgical, vested a host of patients with new life.

From Akola to Dr Oswal for his treatment. This was partly due to the word of mouth publicity from among the friends and relatives of the patients that he has earned and partly due to the coverage in the press media to his earlier successful endeavour in treating patients of the newly born to breathe oxygen at the time of its birth.

Dr Gunwant Oswal commenced his treatment by administering a unique combination of certain biochemics and of some homoeopathic drugs, which he does not want to disclose at this stage of time, and simultaneously kept on documenting, videoing as well as photographing all, even minor developments and improvements that started taking place at different stages during the course of his treatment.

What was witnessed at the end of the eight month period of the treatment was that the child which was once absolutely motionless was now able to sit and walk.

As against nearly 10 to 15 exercises per day, the patient was now getting only slight jerks and true step with most infrequent intervals. “It was indeed a stunning event,” recollects Dr Oswal. The parents of the child were overwhelmed with excitement and were short of words to express their gratitude towards Dr Oswal.

Dr Oswal chose to refer the case with all relevant documents, video tapes, treatment and result details to some of the renowned medical experts in the medical field from Pune, requesting them to critically examine the case and favour him with new ideas. The experts gave him 100 percent assurance and with a new ray of hope he has decided to do the same for the entire mentally retarded patients.

Dr Oswal’s approach of treating the patients with the help of modern Ayurveda is also helping the non-MR patients.

What Dr Oswal vehemently wants the parents of the mentally retarded children to essentially understand and realize is that mental retardation is not at all a disease. It is a subnormal state of intelligence.

According to him the condition of mental retardation can be attributed to several factors, which again can broadly be classified into three different categories: prenatal, postnatal and at the time of birth, besides of course being hereditary and as a result of consanguineous marriage. The children suffering from cerebral palsy can also fall victim to MR.

In the prenatal category, malnutrition is in exposing mothers to infectious diseases like measles, rubella contracted by such mothers or teratogenic effects of drugs, alcohol, etc. even pregnancy above the age of 35 years of the mother and X-rays, in first trimester contribute in the case of MR.

In the ‘at the time of birth’ category, delayed or prolonged labour, wrong use of forceps, excessive bleeding and also inability of the child to breathe immediately after its birth are some of the factors that cause MR.

Whereas in the ‘postnatal’ category the factors liable for MR can
Photograph of lateral surface of the human brain.

He also arranged the presentation of the said case before a small but prominent circle of doctors from Pune including pediatricians, neurologists, and ophthalmologists.

One of the leading neurologists from Pune wrote: "The (patient) is essentially seizure free now, except for occasional myoclonic jerks. He is mobile on his own with a certain degree of ataxia and imbalance of gait. He follows light and his pupils react well to light. Fundus would not be visualised without dilution. He answers to his name being called and says "Aai and Dada!" There is significant improvement in his mental status and seizure control."

Since then, Dr Osval has treated and well documented nearly 35 to 40 cases of mental retardation with or without epilepsy of different nature, has still been probing in the dark for the knowledge in respect of brain cells and their functioning. What is known to the medical science about this is, as of now, can partly be described as 'tip of the iceberg' they assert unanimously.

Obviously, the treatment in Allopathy, the most popular today, as it offers instant or quick relief, in the cases of mildly retarded ones has largely been confined to conserve their condition so as to prevent any further or progressive damage to the brain. The initial plan goes on and on for several years without offering cure or remedy.

It is on this backdrop that a child of six years of age, which was literally in the "vegetable form" was brought, all the way from Bombay too.

A heap of papers accompanying the patient included the case history of the patient, Electroencephalography (EEG), CTs, MRIs, IQ tests and various routine blood tests and diagnosis. The prescriptions were unalterably very identical, indicating that a conventional line of medical treatment in order to control convulsions was the only recourse every one of the who attended the case, had chosen. None of the, of course, ruled out natural remission.

The diagnosis in the case was "Hypoxic Brain Damage" due to status epilepticus with Bilateral Optic Atrophy and Cerebral Lipidosis. In simple terms, damage was caused to the brain and its overall functioning because of the inability of the child, ill-effects like convulsions, fits, untreated epilepsy, head injury, encephalitis, lead poisoning, etc.

However, whatever may be the category or factors responsible for mental retardation the parents of such children must not be burdened with the sight of the fact that an early detection of mental retardation can undoubtedly facilitate timely treatment as well as appropriate training to the child and most importantly, it may also help prevent further deterioration of the brain, cautions Dr Osval.

Of late, only some of the private clinics and hospitals and a few consultants from Pune have started referring their MR patients to Dr Osval but after a thorough scrutiny of his experience and research, a well-known Post Graduate Institute of Medicine and Surgery, Pune, has accorded him the facility to conduct "double blind study of its acceptable number of MR patients."

In order to establish the efficacy of his therapy beyond doubt, Dr Osval is keen to pursue to study and conduct further trials in greater detail. He has plans to set up a Research-Clinic treatment centre, where he can work on incurable or degenerative chronic diseases like Spinal Muscle Atony, Motor Neuron disease, Liver diseases, Neuropathy, etc.

What’s more, he needs an access to a large forum/platform to read papers, table his results and interact with seniors in the field and learn more about the different aspects of Allopathy. A forum perhaps the cause keeping him at bay from the mainstream medical audience and circle.
New hope for Autism, other brain disorders

Gyan Galli

What is G Therapy?

G Therapy is a combination of homeopathy and biofeedback. It is called the "G Technique" and is a form of homeopathic treatment that uses biofeedback to help patients improve their symptoms.

How does it work?

G Therapy works by using biofeedback to help patients improve their symptoms. This involves using specific treatments to help patients improve their symptoms, such as medication, diet, or exercise.

FAQs and Fundas

Advice for parents:

- Talk to your child about what G Therapy is and what it can do for them.
- Make sure your child understands that G Therapy is not a cure for their condition.
- Encourage your child to participate in G Therapy sessions and to work with their healthcare provider to develop a treatment plan.

The Times of India | December 20, 2008
Different therapy for brain disorder

In modern medicine, treatment of brain disorders has evolved significantly. However, there are certain cases where conventional methods do not yield satisfactory results. A new approach in Bangalore has shown promising results in treating children with brain disorders.

The treatment, known as "indocid therapy," has been developed by Dr. V. S. Reddy, a renowned pediatrician in the city. Indocid therapy involves the use of a specific combination of drugs and vitamins tailored to the individual needs of each patient.

"We have seen remarkable improvements in children who have been unresponsive to conventional treatments," says Dr. Reddy. "The success rate of this therapy is over 80%, which is significantly higher than traditional methods."

The therapy is particularly effective in treating children with disorders like attention deficit hyperactivity disorder (ADHD) and autism spectrum disorder (ASD). The key to its success lies in the personalized approach, where the dosage and combination of drugs are adjusted according to the child's specific needs.

For more information, visit [IndocidTherapy.com](http://IndocidTherapy.com) or contact Dr. Reddy at [0123-456-7890](tel:0123-456-7890).

---

Bangalore: Parents, Mr. and Mrs. S. R. Reddy, got a ray of hope when their son, a 6-year-old student, was diagnosed with ADHD. Traditional medication failed to control his symptoms, but after starting the indocid therapy, they noticed a significant improvement within a month.

"We have been on several medications for years," says Mr. Reddy. "Nothing seemed to work until we heard about this new therapy."

Dr. Reddy explains that the therapy is a combination of vitamins and specific drugs that work on identifying and correcting the underlying biochemical imbalances in the brain.

"It's not just about giving the child medication," he says. "We also work on the lifestyle and dietary changes that can further aid in the improvement."
M. A. MANOU meets a cure doctor who has done pioneering work in seeking out a cure for victims of cerebral palsy and mental retardation.

CASE 1
JAYESH KUMAR, 20 years. Both with irreversible brain damage. Before treatment: severe ataxia, speech problems, inability to hold up head. After treatment: normal speech, able to hold up his head and carry on a normal conversation.

CASE 2

But surely all is not well. Despite the doctors' claims, many patients and their families are still in despair. They are seeking a cure for their loved ones. Many have been told that there is no cure and that they should be content with the limited abilities of their children. The parents are left to wonder if there is any hope for a better future for their children.
Doctor’s visit of hope for brain-injured kids

AN INDIAN doctor is coming to Sussex to offer hope for parents of brain-injured children.

Dr Gunwant Oswal has been invited by parents who have seen how his homeopathic treatment has helped many youngsters improve the quality of their lives.

His treatment is aimed at conditions such as brain disorders, autism and dyslexia.

He has been researching treatment for more than 19 years and his work is well-known to experts at London University and the British Dyslexia Association.

But he warns he is not offering miracle cures saying: “Improvement can never be total, just partial, and things are not foolproof.”

Linda Bannick, from Pound Hill, Crawley, hopes the doctor can help her seven-year-old daughter Sheena.

Sheena suffered a brain disease as a baby and has walking and talking difficulties.

Linda said: “I believe Dr Oswal will be able to do a great deal of good for youngsters in Crawley and the rest of Sussex.”

“All I would say is that people should see him and find out what he might be able to do to help their child.”

“He’s not a faith healer. He is a doctor who has carried out years of painstaking work and has come up with a treatment that seems to help.”

For more details about his services and treatments parents can call Linda on 01293 514046.

All is looking green in the new gardens

A SENSORY garden for the disabled is coming up roses after a final design was approved.

Adur Council wants the garden on the derelict site of former municipal greenhouses at Shoreham’s Buckingham Park.

It would be fully wheelchair-accessible and include scented and textured plants so people with sight problems can enjoy it as much as possible.

Now it has permission, organisers, at Adur Schools Council, need to raise £19,000.

Alan Hemsley, from ASC, said: “It’s progressing very well. We’d love to hear from anyone who can help.”

Briefly...

Writing Workshop

LEYES: A workshop for volunteers about how to write basic funding applications, will be held on Wednesday, between 10am and 1pm.

It will take place at Church End, Cocking Road, and will be led by Charlie Jordan of the Charities Information Service in Sussex.

Lecture

BRIGHTON: A lecture on the challenge of advertising religion, entitled Bad Hat Day? will be held at the Sussex Benney Theatre Grand Parade on Tuesday at 6pm.

Bird song

PULBOROUGH: A short course about how to distinguish different bird songs will be held at Pulborough Brooks RSPB Nature Reserve between 8am and 10.45am on Saturday, March 16. The session begins with a cooked breakfast and will end with a bee drink.

LITTLE MISS MIRACLE

her docs by walking

Shereen, 8, amazes
A SEVERELY brain damaged child has amazed doctors and beaten the odds by walking unaided for the first time.

Just three months after taking the pioneering G-Therapy treatment brave Sherreen Buxton let go of her mum's hands and walked.

And the Crawley News was there to capture Sherreen's first steps on film.

Mum Linda, of Barnwood Road, Penshurst Hill, said: "Sherreen is not supposed to be able now."

"When she let go of my hand I was in disbelief. I never thought I would see her walk. We were too happy to cry."

"I had never given up hope for Sherreen but I was adjusting myself to thinking 'well I have done my best'. But now who knows what she is going to do."

Eight-year-old Sherreen was born severely brain damage with ataxic and cerebral palsy tendencies.

Linda, 41, said: "She used to be lost in her own world for hours."

"But just after two weeks of taking the alternative medicine G-Therapy she woke up and had her first steps."

Therapy Sherreen's balance came.

Linda added: "Now she is actually trying to get words out. It is a remarkable breakthrough. She actually gets frustrated when she can't express herself and stomps her feet."

"Her voice has changed, she has put on weight and gained muscle tone."

"The G-Therapy has unlocked something in her brain."

Doctor Abdelhadi, consultant paediatrician at Crawley Hospital said: "I have known Sherreen for a year and her walking is something we would never have anticipated. It is amazing."

"There was very little hope for Sherreen, her quality of life was poor."

But Dr Abdelhadi congratulated Sherreen's family for not giving up hope.

He said: "Sherreen has seen every specialist doctor in the UK, Germany and France."

"The fact that G-Therapy worked shows that there are areas in the medical field which are still missing."

**THERAPY IS LIFE'S WORK**

**DOCTOR** Sunwant Oswal from Pune in India is the man behind the revolutionary homeopathic treatment G-Therapy.

Based on an ancient Indian cure Dr Oswal has spent more than 24 years working on G-Therapy and helped more than 1,700 children. He is now asking doctors to officially recognise his work.

Dr Oswal said: "I am committed to help all children. This is my life's mission."

"I do not want anyone to be deprived of this simple and easy way to help children."

"Every child who has not received proper treatment is a tragedy."

Dr Abdelhadi said: "Homeopathic treatment is recognised all over the world and I would be happy to help Dr Oswal get recognition in the UK by introducing him to the right people."

THE NEWS
March 12, 1997
Optimism is the Key
But what’s done can’t be undone. We Modrins are optimistic people and those who strongly believe in Allah never lose hope. I was hoping against all odds but life had started to become an ordeal for us. We did everything that was possible in our capacity and limited resources. We took her to many doctors. Some were sympathetic; some were outright rude to the extent that completely crushed all our hopes to bring her back. We would say that she would never be able to sit or walk. There may never be any change in her condition, some would say. To pass a judgment like that is easy but imagine the mother’s desperate state. I always came out of the clinic with tears in my eyes and desolation in my heart.

Years passed by swiftly. There was no change in my daughter’s condition. She could not sit, could not hold her head, couldn’t see straight in the eyes. Other children of her age had started going to school. My daughter was still at home completely dependent on me. Life was getting tougher and tougher by the day and often I wondered if that was the time when people around you do nothing to lessen the pain. Parents of mentally challenged children have to face challenges everywhere. They can be found across many cities, the pain could not react turned when they see or meet anyone.

Mrs. coins of joy would not un

I had gestational diabetes during pregnancy. When the baby was born, she was not born with the required medical condition for the child of a diabetic mother. After a few days, she started having convulsions and her sugar level came down to 10. Then came the most disheartening news which tore our heart to pieces. My daughter, my little angel, was now a C.P. child, that is suffering from cerebral palsy. It still hurts a lot while I am writing this article. If only it was possible to reverse the act of negligence that happened that day.

But what’s done can’t be undone. We Modrins are optimistic people and those who strongly believe in Allah never lose hope. I was hoping against all odds but life had started to become an ordeal for us. We did everything that was possible in our capacity and limited resources. We took her to many doctors. Some were sympathetic; some were outright rude to the extent that completely crushed all our hopes to bring her back. We would say that she would never be able to sit or walk. There may never be any change in her condition, some would say. To pass a judgment like that is easy but imagine the mother’s desperate state. I always came out of the clinic with tears in my eyes and desolation in my heart.

Years passed by swiftly. There was no change in my daughter’s condition. She could not sit, could not hold her head, couldn’t see straight in the eyes. Other children of her age had started going to school. My daughter was still at home completely dependent on me. Life was getting tougher and tougher by the day and often I wondered if that was the time when people around you do nothing to lessen the pain. Parents of mentally challenged children have to face challenges everywhere. They can be found across many cities, the pain could not react turned when they see or meet anyone.

The devoted nurses brought about a change in her condition. She started taking her therapy and gradually started making progress. She learned to walk on her own and even to talk. The change was miraculous. The nurse who took care of her was like a second mother to her. She was always there to support her and help her.

In the field of physiotherapy, a lot has been done in Pakistan. In our neighboring country India, there are many excellent hospitals and rehabilitation centers that provide the best possible care to children with cerebral palsy. One such center is the Vishakapatnam based on the pioneered by Dr. Gunvant Oswal. Aman was going through Dr. Oswal’s hyperbaric and ayurvedic therapy called G-therapy for the past 10 months. It brought tremendous improvement in Aman’s condition. These days he appears more alert to his surroundings. He is now responding and interacting positively and purposefully.

I wondered what was G-therapy all about? Actually it was exactly the treatment I was waiting for and praying for all these years. This treatment removes the blocks in the brain cells of people with conditions such as cerebral palsy, down syndrome and autism. It was the treatment for which I was waiting to go to any part of the world. But Allah is so kind, and I had just to go to Pune, which is a few hours away from Delhi. We decided to take him to the Suni to Dr. Oswal’s clinic in Pune. We went there for three hours and getting through different assessments we met the man himself. After years of research has kept a huge video library of these cases handy for anyone who doubted his claim can always view them. When a patient comes to him for treatment Dr. Oswal prepares a complete medical history with video-clippings. He has a scoring system based on the activity report of the patient to monitor the progress. He works with patients aged between 18 months and 52 years.

While watching the video-clippings of patients I witnessed the case of the recovery of a 15-year-old girl Shalpa. She was suffering from cerebral palsy and had been mostly turned into a vegetable, needing help to walk and feed herself. She had a vacuous look in her eyes and barely recognized anyone. A few months after she began G-therapy a dramatic change came about. The vacuous look was replaced by a warm smile. She could stand and sit without any assistance. Her hand and mouth coordination improved so much that she could feed herself.

Another wonderful recovery was of Vinita, who had never walked during 26 years of her existence. Just one month of treatment enabled her to walk and even squat.

This therapy has not only proved fruitful to patients in India but has impressed foreigners as well. Ashley Smith, a 17-year-old boy from the UK has been undergoing G-therapy for the past two months. His mother says he has now become much more mentally alert than ever before. Some children are fortunate enough to show signs of improvement within 24 hours of taking the first dose. Karen Foster from Sussex is one such lucky child.

In my daughter’s case it has taken a little while to notice any change. But now by the grace of God, the improvement in her is quite apparent, though her mental health seems to be in a better condition than her physical health. But I know she’ll further improve by leaps and bounds. I am quite optimistic about it.
The G factor in Dr Oswal’s life

After 24 years of intensive research, Dr Gunvant Oswal, an Ayurvedic medical practitioner from Pune, has formulated the unique G-therapy. G-therapy is a combination of herbal extracts. It has been tried out in over 3,000 patients with brain injuries, development and nervous system disorders and has shown remarkable improvements in the motor and higher cortical functions of the brain in over 4,000 cases.

Dr Oswal, "The medicine is an extract of vegetable origin, made potent by successive dilutions, and administered just once a day. It is a unique combination of herbal extracts, prepared in homeopathic form and treated with biochemic salts."

The successful combination has been developed over a 25-year period through original research in Ayurveda and homoeopathy. The G in G-therapy stands for Dr Oswal’s initial. Says the doctor, "Modern medicine has little to offer by way of treatment for conditions like cerebral palsy, mental a boon for many.”

Dr Oswal, who is a bachelor of Ayurvedic medicine and surgery, says that the medicine is not very expensive and is given to poor patients free of cost. It has no side effects and can be combined side by side with other treatments as well. "G-therapy is safe and free from side effects and has been tested for toxicity in the US and UK. The results showed no presence of toxic materials to the parts per billion level," Dr Oswal states.

Presently visiting Dr Oswal are the Cerebral Palsy Network, a team of parents and doctors from the United States. The team has collected data on G-therapy and on their return to the US, will carry G-therapy medicine for 55 American patients for the clinical study. Gregory Salopak, a member of the team says, "We have seen video recordings of many patients before and after the treatment and the progress has been impressive.”

Gunvant Oswal will soon start a centre for neurological disorders and complementary medicine in Pune. In 1979, he compiled a treatise on Indian medicine. Dr Oswal was born in 1936 to Bapu Oswal, a respected social worker in Ahmedabad.
G THERAPY GAINS WORLDWIDE ACCLAIM

Centre for neurological disorders to come up in city

By our staff reporter

G therapy, a magic word for those suffering from neurological disorders, will be available to more people as the innovator of this complimentary form of medicine, Pune doctor Dr Gunvant Oswal announced plans for setting up the Centre for Neurological Disorders and Complimentary Medicine in Pune, shortly.

Addressing a press conference, he announced that the centre which is being designed by eminent American architect Christopher Neumaner is to be located at Clover Pinnacle Ridge in Kondhwa and is likely to be ready in a year. It will be a multi-disciplinary institute where different therapies that are complimentary each other will be practiced for the 'holistic healing' of patient.

A team of high ranking American citizens, all members of the Cerebral Palsy network in the USA were in the city this week to collect data on G Therapy. They were Dr J. Torpey (ophthalmologist), Maria Rosa Crespo (worked at WHO), Li Col Sheila Patricia Michalkoe (US airforce) and Gregory Shlupka (leading American businesswoman). Sheila and Gregory are both parent representatives of the US study group.

About their own experience as parents of children with neurological disorders this is what two members of the US study group had to say.

Col Sheila Patricia Michalkoe (US airforce) and Gregory Shlupka (leading American businesswoman). Sheila and Gregory are both parent representatives of the US study group.

About their own experience as parents of children with neurological disorders this is what two members of the US study group had to say.

G Therapy has been proven to calm and soothe the nerves, thus putting to relax a hyper-active individual suffering from neurological disorders.

Gregory Shlupka. We are usually very skeptical, questioning and careful while accepting anything like this. However after interacting with a number of people who have undergone G Therapy, I can say that I am very optimistic and would like my 12 year old son to be treated by G Therapy. As a parent, I want what is best for my child. What struck me most was that G Therapy calms the nerves and relaxes a hyper-tense and hyper-active individual suffering from neurological disorders.

There are three families in the USA practicing G Therapy. I hope that in time it grows.

LtCol Sheila Michalkoe: I did not believe in pills being a magic wand and do not expect or believe in many miracle cures.

Yet, the first person accounts which I saw and heard were encouraging. One was the case of a young boy who had always been afraid to sleep alone for he feared that he would stop breathing. After G Therapy, he has lost all fear and it has brought so much of hope and relief to his family. This is a small and subtle improvement but a monumental one for the parents. I am eager to return home and try the G Therapy on my son. On their return to USA, the team will carry the G Therapy model.

THE G THERAPIST:
Dr Gunvant Oswal, inventor of G Therapy.

Dr Oswal's studies have been well documented and he claimed to have the largest database on neurological disorders in the world. Dr Oswal claimed that G Therapy promised to revolutionize the sphere of treatment of brain and nervous disorders since modern medicine offered little hope of a remedy. He said that the improvements were significant and that more than 80% of his 500 patients had shown significant improvements.

He said that the results varied from person to person. While some had shown noticeable improvement in minutes, others had taken years. Yet, the therapy could be used on any age group ranging from newborn children to octogenarians, the doctor claimed.

Dr Gunvant Oswal who is an Ayurvedic doctor said that G Therapy worked on the principles of homoeopathy and ayurveda and that the combination was developed after 25 years of research in these fields. It was totally free from side effects and had undergone stringent testing in American laboratories and was found to be free from toxins, steroids and other harmful substances. Dr Oswal said. Dr Oswal's work has generated tremendous interest worldwide. It was discussed at the 9th World Pediatric Congress, London in 1995, International Parent and Parent Congress in 1996 and 11th World Congress on Mental Retardation in 1997. G Therapy is presently used in UK, USA, Australia, Middle East and even in the West Indies.

For further information visit www.g-therapy.org or call: 0335511.
Is G Therapy the answer?

Dr. Gunwanti Oswal's work on the treatment of cerebral palsy is of much interest in India and abroad. The ayurvedic practitioner's approach, which involves a mixture of herb extracts in tablet form, is the focus of much interest.

**Breakthrough cure for cerebral palsy**

After 24 years of research, a Pune doctor has developed a therapy that shows amazing results in treating brain-damaged children, and is attracting world-wide attention, reports Sameera Moledina

Cerebral palsy is a devastating condition caused by damage to the brain before, during or immediately after birth. There is no known cure. But now there is hope.

Dr Gunvant Oswal, an Ayurvedic medical practitioner from Pune, has researched for more than 24 years to prepare a therapy which has yielded amazing results in treating children afflicted with cerebral palsy. So far, he has treated 2,500 cases. The meticulously recorded evidence shows visible improvement in more than 70 per cent of his patients. Interestingly, the improvements are seen almost immediately after administration of the therapy.

Dr Oswal’s Centre for Developmental Disorders in Pune has evolved the medicine using traditional Indian Ayurvedic techniques. The therapy, which he calls G-therapy, is attracting international attention. He has treated patients with a remarkable degree of success in about a dozen countries all over the world.

The ‘medicine’ is an extract of vegetable origin, potentised by successive dilutions, and administered just once a day. It is a unique combination of herbal extracts, potentised in homeopathic form, and biochemic salts, he reveals.

According to Dr Oswal, almost 20 per cent of children with cerebral palsy also suffer from mental retardation, and two out of every 1,000 births suffer from cerebral palsy. In developing countries, his percentage is even higher as there is no active medicine to help the damaged brain.

Neuropathological problems from early childhood manifest itself in cerebral palsy, epilepsy, learning difficulties, and other behavioural problems. Cerebral palsy poses the greatest challenge to treat, he adds.

Meanwhile Dr Oswal’s amazing evidence has been received with great interest in some of the most prestigious international medical conferences like the 9th World Paediatric Congress, London, in 1995, the European Academy of Child Health Disability, Dublin, Ireland, in 1996, the International Parent to Parent Congress, USA, in 1996 and the 11th World Congress on Mental Retardation, in 2007.

His work was highlighted on London television, and several institutions from developed countries like UK, Australia and USA are exploring Dr Oswal’s neurological breakthrough.

Dr Oswal with a confident 8-year old Shereen Banniah at Crawley in UK after the girl amazed doctors by walking for the first time in her life after being administered the G-therapy.
palsy

visits his patients in Europe, UK, USA, Australia, Middle East, and even far away West Indies to hold out hope to numerous young victims of cerebral palsy and other neurological disorders.

GRATEFUL PARENTS

Some of the letters he receives from grateful parents speak volumes about the success of his treatment. Writes Pippa Foster, a chartered psychologist and psychotherapist from UK, "My son is six years old. He was diagnosed as having right-sided hemiplegia at the age of five months. This affected his right arm and leg. He developed normally until two years. Then after some inoculations and prolonged use of antibiotics for an ear infection, his behaviour became rigid and stereotyped. He lost his ability to construct sentences and began to mimic phrases and echo words. He became destructive, could no longer sit and concentrate and could not understand language. At the age of three, he was diagnosed as having epileptic seizures (petit mal). He was put on high doses of anti-convulsants; he was on these when he started G-Therapy in December '97.

From then onwards, his language seemed to improve remarkably. He is constructing more complex sentences, expressing his needs clearly and commenting on events around him. He is more present. He will respond immediately when spoken to as compared to before when he would take several repetitions to attract his attention. He can even obey complex instructions. He dresses himself and

Centre for neurological disorders and complementary medicine for city

A Staff Reporter

MODERN medicine has little to offer by way of treatment for conditions like Cerebral Palsy, Mental Sub Normality, Autism etc and the conditions are generally considered irreversible. Such patients have to rely on Occupational Therapy, Speech Therapy etc. There are, to the best of our knowledge, no medicines available for bringing improvement in the motor and higher cortical functions of the brain.

G THERAPY (Glowing therapy) is a promising treatment for the millions of patients suffering from these disabilities, and it has proven its efficacy on over 4,000 patients worldwide.

Pune-based Dr Gunwant Oswal—innovator of G Therapy, which has been steadily gaining worldwide recognition, today unveiled plans for the ‘Centre for Neurological Disorders and Complementary Medicine’. This is a multi-disciplinary institute, in which different pathologies and therapies complementary to each other will be practiced, keeping in mind the individual needs of the patient.

Dr Oswal is a Bachelor of Homoeopathy—developing countries; the percentage is even higher, as there is a closely involved in all the research and no active medicine to help the activities. The main research activities will be carried out in Neuropathy, SSPE, Liver Cirrhosis, Hepatitis, Infertility, Neurological Disorders, Strokes etc.

Dr Oswal’s son Prasad, and daughter-in-law Mrs Roopa, are busy in research of exploring health care products and special unqiue oil for tranquility—for ‘Special Needs’ children.

According to Dr Oswal, almost 20% of children with cerebral palsy also suffer from mental retardation, and two out of every 10,000 births suffer from cerebral palsy.
Cerebral Palsy Therapy for Today's News
G Therapy: A Ray of Hope For Hopeless Children

By Anjali Aronkar

His therapy does not offer total care for behavioural disorders, but certainly is the first medicine for the neuropaths.

It is said that when a person is suspected to be suffering from a neurological disorder, the first step is to consult a neurologist. However, in recent times, this has changed. The introduction of G Therapy has opened up new avenues for the treatment of neurological disorders.

G Therapy was developed by Dr. Guruvant D Oswal, a neurologist, who has been working in the field of neurology for over 30 years. Dr. Oswal has been a pioneer in developing new treatment methods for neurological disorders.

The therapy is based on the principle that emotional imbalances are the root cause of many neurological disorders. The treatment involves a combination of counselling, exercises, and medications.

The first step in the treatment is to assess the patient's emotional state. The therapy aims to help the patient understand and control their emotions, which can lead to improvement in their physical condition.

The therapy is not just for patients with neurological disorders. It can also be used to treat patients with other emotional and mental health issues.

Dr. Oswal's approach has been well received by patients and healthcare professionals. The therapy has been found to be effective in improving the quality of life of patients.

The Centre for Developmental Disorders and Complementary Medicine, founded by Dr. Oswal, offers the therapy to patients in need.

The Centre provides a holistic approach to healthcare, focusing on the emotional and mental health of patients. The Centre offers therapy programmes for patients of all ages.

The Centre has gained recognition for its innovative approach to healthcare. Dr. Oswal's work has been featured in various media, highlighting the importance of emotional health in overall well-being.

G Therapy has been found to be effective in improving the quality of life of patients. It is a promising therapy for patients with neurological disorders, and it is expected to gain more recognition in the future.

The Centre for Developmental Disorders and Complementary Medicine continues to work towards improving the lives of patients through innovative therapies. It is a testament to the belief that emotional health is just as important as physical health.

Dr. Oswal, along with one of the patients in his Centre for Developmental Disorders and Complementary Medicine, Pune.

Медицина без границ
On May 1996 on the invitation of Dr. Gunvant Oswal, a deligiation of Interzonal / organization of Life assistance to mentally retarted people, visited the City Pune in India with the aim of getting aquainted with the methods of treatment of cerebral palsy and mental retardation. It should be mentioned that when we flew to India, during our stay there and at the doctors Clinic the feeling of disbelieve did not leave us because to us - the paraents of the children with similar disease who had tried so many methods of treatment, had spent so much of money on it, it was difficult to believe that we have really come across the “ordinary” miracle. Ordinary because according to Dr Oswal there is nothing new in “G-Therapy” (that is how his treatment is known). It all started with a great interest in the 2000 year old Indian books on homoeopathy which were collected and preserved by his father. It is proved that 2500 years ago there was on Indian medicinal system Ayurved and the skilled doctors of that time Charak and Sushrut in those days wrote about cerebral palsy and mental retardation,about the possibility of its improvement, about conditions and ways to use homoeopathic remedies. And in their old works the doctors scoop the ancient, forgotten methods of treatment. It is difficult to believe but it is a fact that in our era of impetuous scientific developments the technology of human brain is practically not studied and the children born with these complicated diseases/illnesses are compel to suffer throughout their life without any hope of leading a normal life. In Dr. Oswal’s cabin we met the children, who before the treatment couldn’t move or speak but now they themselves entered the cabin, greeted the doctor, laughed and conversed with us. And what a happiness blushed on their parents faces! To whom other than them is known how difficult it is to give a very small victory to their children.
The doctor picturises the whole process of treatment on a video cassette so one can trace the condition of a child from the beginning of the treatment up to the present day. Dr. Oswal is a very simple man, speaks little and he is literally torn into parts and is called from America, Great Britain and is requested to come on the next consultation (Oswal centres are coming up in many countries).

As far as possible he responds to all the requests. And after getting acquainted with our organization for the first time in November 1994 in Delhi at the world congress of International league of societies helping the mentally retarded people (our union is called the only organization who is the member of this league in Russia) he showed a great desire to help the Russian spastic children in all the possible ways. In August - September Dr. Oswal will conduct consultations in his centres in USA, Great Britain, Germany and at the end of September he will be a guest at our organization. Purpose of his visit is to render help to our children. “I am not a God” he says “but if I am successful in helping at least some children I will feel that I didn’t spend my life in vain”. Yes he is not a God but he really works wonders which give hope to the parents and a feeling of happiness to the children.

It means happiness is possible. We are waiting for you Doctor!
